PROFILE

I'm a software engineer from Tirana, and I've never been good at leaving a problem half-solved. My favourite work is the kind you can see in the real world: robots, sensors, a house that answers to a phone. I've built web apps for clients who trusted me with their business, written backend code at Sisal, and now keep the systems at the Albanian Development Company running. I also mentored a student robotics team all the way to a championship win. Next, I'm looking for a team where I can grow as a backend and full-stack engineer.

EDUCATION

Bachelor in Software Engineering — Metropolitan University of Tirana *Sep. 2023 – May 2026*

EXPERIENCE

IT Specialist — Albanian Development Company *2026 – Present*
Managing and supporting IT systems, devices, and services — setting things up, keeping them running, and troubleshooting issues as they come up.

Backend Developer Intern — Sisal *Mar. 2026 – May 2026*
Contributed to the development and maintenance of backend systems built on Java Spring Boot, working within a professional engineering team on production-grade codebases.

Robotics Competition Mentor *Feb. 2024 – Mar. 2026*
Led and mentored a student robotics team from concept to competition — overseeing technical implementation with Arduino and Raspberry Pi, coaching problem-solving under pressure, and delivering a championship result.

Projects

Fleet Management System
Platform for running a company vehicle fleet, with insurance and inspection expiry alerts, service history, fuel reconciliation, department-level permissions and audit logs. React, Node.js, PostgreSQL, Prisma.

Këpuca e Artë — E-Commerce Store
Live bilingual shoe store with product variants, reviews, checkout, order tracking, automated emails and an admin panel. MERN, JWT.

Inventory Management System
Internal tool for tracking products, assets, suppliers and employee equipment, with admin roles, bulk Excel import/export and a full audit trail. React, Node.js, MongoDB.

Also built a gamified onboarding app for young customers at the Raiffeisen Bank Youth Hackathon.

SKILLS

Languages: Java, JavaScript, TypeScript, Python, C

Web: React, Next.js, Node.js, Express.js, Spring Boot, REST APIs, HTML, CSS

Databases: PostgreSQL, MongoDB, Prisma

Auth & Security: JWT, OAuth2, Spring Security

Tools: Git, GitHub, Docker, VS Code
